

INTRODUCING

# GREASE TRAPS

The Supreme Industries Ltd., is an acknowledged leader of India's plastic industry. It is credited with pioneering several path breaking products and has valuable experience in providing innovative and cost effective piping solution. The innovative product portfolio offered by Supreme is extensive in range and application and comprises a variety of pipes and a vast spectrum of fittings totaling around 7000 diverse products. Together these constitute the most comprehensive range in the industry that caters almost every conceivable need and application.

In our endeavor to introduce newer and newer products, Supreme has come out with yet another most needed, useful and excellent product i.e. Grease traps or grease separators. Designed considering functional requirements, customer needs and expectations Supreme Grease traps are much better and cost effective than any alternative products available in the market.

A grease trap is a device designed and installed to separate and retain oil / grease particles which are deleterious, hazardous and undesirable before they enter the sewer system. If large amounts of grease, soaps and oils enter a sewer system, the materials will coagulate, solidify and adhere to the inside wall of the pipe, eventually blocking or partially blocking the pipe.

A Grease Interceptor is a "Apparatus for the separation of grease from waste water, containing grease with the exception of sanitary waste water, in such a way that, due to the difference in density between the substance to be separated and the carrying liquid and the reduction in flow velocity, the grease particles are separated from the wastewater by flotation".

Size	Socket Type	Dimensions							B x B
		H	H1	H2	L	D	D1	D2	
50 mm	RxR	440	345	311	646	75	75		530x380
500 Ltrs	RxR	731	600.5	560.5	1335	110	110	-	1175x610

**Application:** Restaurants, hotels, canteenas, schools, hospitals and institutional or commercial buildings where food is served in great quantity may produce grease in sufficient amounts to warrant the installation of grease traps.

Dairies, slaughterhouses and commercial food-processing plants have grease and fats as by products and require grease trap. Gasoline service stations, automobile repair shops, laundries, dry-cleaning plants, machine shops and industries using chemical processing are sources of flammable and volatile wastes that must be removed and treated; machine shops, garages, service stations, hospitals, medical clinics, dental laboratories and fish preparation areas also need grease traps.
